Perhaps the tech exam for code free techs should be more difficult. The FCC tests are too easy in general (an opinion!). The advanced test has some ERRORS on it! Specifically, some of the questions abt the components in square and sawtooth waves have INCOMPLETE (not totally incorrect answers). Anyway, like I said, techs should have harder theory...

For a while, I was in favor of codeless techs needing to pass 2, 3A, and 3B. However, I then thought to myself: does the knowledge of 1A somehow offset a coded-tech's knowledge to the point where s/he is equal in technical know-how to a no-code tech?

Clearly not. Therefore, I've come to the conclusion that the 3A and 3B elements ought to be recombined, and the question pool re-written to shore up the theory. Then, modify the license requirements so that Techs, regardless of code level, should pass Element 3.

Well, I'll reiterate what I said about the same length of time ago: beginning in October, the FCC will start beta-testing a new licensing system that will permit the electronic submission of 610 forms, which, if all goes as planned, will come into full use around the first of the year, and will cut the time from exam to license arrival to 4-5 days. Maybe my post didn't make it out; I saw not one response to it.

Subject: DTMF Squelch Systems  
To: ham-policy@ucsd.edu

Greetings...

I've started work on an article for QST that describes the DTMF Squelch systems that are included (or available as options) for some of the more recent imported VHF/UHF handhelds and mobile rigs.

After using these things for several months I've formed some opinions about the good, the bad and the ugly aspects of these systems. I'd also like to hear what you think about them. Please let me know of your experiences: what works, what doesn't work, what you like, what you don't like, how it could work better, etc.

I've got a pretty short fuse on this so it would be most helpful if I could have your input by August 1. Also, please send email directly to me, rather than posting it here. Feel free to post it here if you want, but I would be grateful if you could also send me a direct

email.

Thanks for your consideration.

Yeah, but at least I care about the issues. I also don't spend most of my time denigrating a class of amateurs simple because they chose to enter the hobby without passing element 1A.

>Now, don't get me wrong, I \*am\* in support of a no-code (aka "no-clue")  
>ticket...just not in its current form. I believe one of the supporting

>nice and fine in theory, but not in fact. Here in Houston, virtually all  
>of these new hams have headed straight for Two Meters.

Does calling it a "no-clue" license help soothe your conscience? After all, they aren't "real" hams, they're just "no clues". (Why does this sound so much like the 60's and another much larger group of supposed second class citizens)

Also, I now see the logic in what you support. Those bands weren't good

enough for the existing amateur population to use, so we create a new second class group of hams and give them the table scraps. How quaint. You're as bad as my neighbors. I think they call it NIMBY.

Personally as someone that started out with a no code license, I spend as little time on 2 meter and 70 cm repeaters as possible. If that's what amateur radio is all about, why not just get a cellular phone?

Subject: Real CBers  
To: ham-policy@ucsd.edu

I seem to remember that shortly after the big CB bust when CB went to 40 channels that many of real CBers learned to talk in Morris and got their ham licences. Most of the new Technician class hams I have met seem to have a technical background rather than being CBers, of course I don't hang around on the local repeaters except for the AMSAT net.

To: ham-policy@ucsd.edu

I'm sorry to say this, but I have gotten really discouraged with this newsgroup lately. In reading over some of the latest BS about code vs. no-code, I have seen just how \*stupid\* people can get.

I am sick and tired of reading how the "no-clues are ruining ham radio" and how the "OFs are elitist." Many people seem to think \*all\* co-code Techs are CB-implants, and also that every General/Advanced/Extra Class ham is against the no-code license. This isn't true. If you truly feel something needs to be done about some policy, go try to change it (within the system). Please don't complain to everyone on the net that you are being oppressed.

Also, I would hazard to guess that most of the really-OFs are not against no-codes. From my (limited) experience, I've seen most of them (licensed prior to 1960) have seen enough changes that they do not see this as anything new.

>to do so if the user is a licenced Ham as long as he abides the 4 watt  
>pep rule etc?

The chance for abuses are extreme here, a CBer now can more legitimately own an Amateur Radio to 'typically' use on 11M (but typically abuse on any frequency he feels fit to open up ...). Part of Type acceptance is to channelize the rig so it is idiot proof, I doubt that any Amateur would even use a Amateur Radio 'legitimately' on CB (power, frequency, et al) since the 11M band is hardly a gentleman's band (neither is 14.313).

Now, just image the manufacturers making a Type Accepted Amateur Radio Rig that automatically is legal (channelized, 4W, VFO and XIT off) to operate on CB as well ... the petty fights between 'natural' Amateurs and 'CB' grown Amateurs just grew one notch ...

|> as to the ARRL's activities.

I don't mean to pick on Ron specifically here, but this puts in a nutshell a sentiment I've seen expressed frequently here. And it's just wrong.

By this logic, none of us should object to the activities of the White Aryan Nation, the Fourth Reich Skinheads, the KKK or the PLO, because we're not members of any of these organizations.

Those who believe the ARRL can profitably changed by its own procedures, and those who believe the ARRL is a lost cause, both have positions which are defensible on their merits. By that I don't mean that they are both right, I mean that they cannot be dismissed as being wrong a priori.

In my book, the only people who should be dismissed out of hand are those who don't understand this. Me, I'm an ARRL Assistant Director, so I've picked my approach. But I sure don't take a dismissive attitude toward those who refuse to have anything to do with the League. Although the League is by far the largest player, and in the case of things like the ITU, the only player, there are other players, and they have every right to do whatever (legal thing) they want, including complain about, and work against, the ARRL. Welcome to America.

Subject : ARRL and it's members

First off, if you're not a league member, you got no bitching rights as to the ARRL's activities.

People have been bitching about perceived subversion by the ARRL board recently and I believe a lot of it's unfounded. The major whine I keep hearing is that the ARRL didn't poll it's membership on this and it didn't poll it's membership on that. Well, frankly, their last attempt at a poll (regarding automatic HF ops) was a miserable failure. They conducted their poll, and many people didn't like the results.

The ARRL is a representative organization. Bitch and moan about it all you want, it couldn't operate except as it does. It is not any different than any other business or non-profit organization, with the possible exception that the bulk of the organization is not paid.

How many of you know who your division director is? Did you read the flyer when he was running for office and vote for or against him? I did. Certainly top of the list of position items a couple of years before we got no-code was whether they supported no-code or not. This was what I based my vote on. With directors being elected in half the divisions right now, you've got another chance.

Did you communicate with your section leader or director after he was elected? The directors addresses (as pointed out already) are in QST every month. I regularly bump into our division director at the area hamfests. I find little sympathy for people who claim that these guys are out of touch, who don't bother to put forth even putting their ideas to the directors. These guys signed up for a lot of uncompensated abuse, they've all got day jobs too, you know.

-Ron
